

NOTIFEYE IS NOW WIFI!

NotifEye™ 900 MHz sensors pass information wirelessly to the NotifEye application which collects and records data 24/7. The sensors operate on a 900 MHz frequency-hopping spread spectrum with an open-field range of up to 2,500 ft and a typical interior range of up to 500 ft. Each sensor is battery operated and monitors against preset conditions that are user-defined within the NotifEye application. Information recorded to the database (°F/C) is time stamped and cannot be altered through the user interface.

\$1995 includes one year of hosting. \$100/annually after 1st year.

The NotifEye Gateway Kit includes 4 temperature sensors (#15200) and a Gateway (#15505). The gateway allows up to 65,000 readings to be stored if internet connection is interrupted and sends alerts if the gateway is not receiving power. Available in RF 900 MHz. Minimum System Requirements: Internet Access via an Ethernet Port PC / MAC Compatible
